Small Business Basics

Demo Library | Business; Entrepreneurship

Begin with a real problem

A business helps a customer solve a problem. Before building a product, speak to possible customers and understand what they already do. A small experiment can reveal more than a long list of assumptions.

Know the numbers

Revenue is money earned from sales. Costs are the resources spent to deliver the product. Tracking both helps a founder understand whether the business can continue. Keep clear records rather than relying on memory.

Improve one step at a time

Marketing explains the value of a product to the right customer. Feedback reveals where it disappoints. A simple cycle of making, measuring, and improving is easier to manage than trying every idea at once.
